About Open Adder	18

Intro

Open Adder is your MySpace promotional and marketing assistant. It automates your MySpace tasks, saving you time and allowing you to focus on other aspects of your promotions.

Installation

Your demo version of Open Adder can be downloaded from www.openadder.com. After downloading Open Adder, double-click on it and it will begin installing. Please ensure you select to save the program to your C drive under your program files (C:Program Files). Choosing to save the program in a different location could cause problems when running it. You will have the option to add a desktop icon for convenience.

Activation

After purchase, you should be redirected to a “Successful Order” page where you can download Open Adder, if you haven’t already; download your bonuses; and, activate your software.

If you are not redirected to the “Successful Order” page, please submit a ticket at the Open Adder Help Area at: <http://www.openadder.com/helpdesk/>

Here, you will also find Knowledgebase articles to assist you and can request help from the staff if you still need help after reviewing the articles.

How to use Open Adder

Open Adder is a MySpace tool that will send and accept Friend Requests, send Messages, Comments, Bulletins, and Invitations for you. You will need to have a MySpace account to utilize Open Adder. You can manage multiple accounts with Open Adder.

Adding Accounts

To add an account, go to “Accounts” at the top and click “Manage Accounts”.

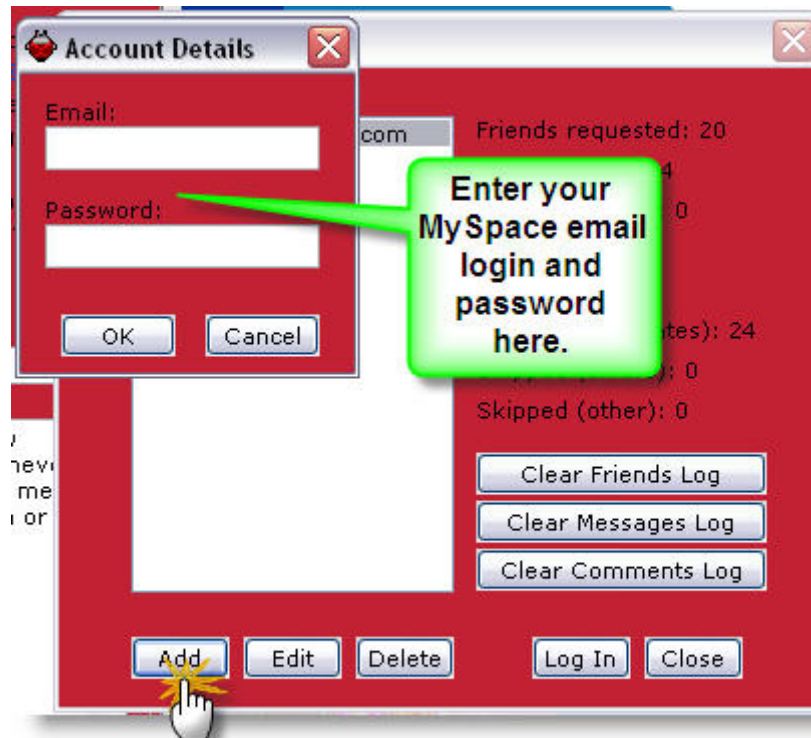

"Manage Accounts"

A "Manage Accounts" Screen will open up.

"Manage Accounts Screen"

Then select "Add" and enter your MySpace account email and password. Don't worry, even though you can see your password it is encrypted for your security.

"Account Details"

To log in with one of your accounts, simply select the account you would like to use and click "Log In". After logging in, you will see your MySpace account as if you were not using Open Adder. Open Adder acts as your browser and you can do everything you would normally do on MySpace. At the top you will notice "Go", "Back", "Forward", and "Skip" buttons that you can use to perform these functions.

"Browser Navigation Bar"

Sending Friend Requests

To begin sending Friend Requests, you will need to first extract profile IDs.

You can extract profile IDs from anywhere you can find them including other people's profiles, groups, music, etc. So go to wherever you would like to extract profile IDs from and then click "Extract IDs From Pages".

"Extract IDs From Pages"

Open Adder will begin extracting the IDs on the page, or pages if there are multiple pages.

You can click "Stop" if you would like it to stop extracting. You can also use the "Pause" button if you would like to pause any of the processes.

Once you have extracted some IDs, ensure you have selected "Send Friend Requests" and click "Start".

Note you have the option to "Limit # To Send", meaning you can tell Open Adder to only send a certain number of Friend Requests. It's best not to try to send too many at one time, slow and steady is the way to go.

If you have a new account, it is recommended you not send more than 50 requests at a time. You could risk losing your MySpace account if you appear to be a spammer.

"Send Friend Requests"

Once Open Adder has finished sending the requests, a pop up box will notify you that the specified number has been reached. And you're all done with the Friend Requests!

*Note: You can send Friend Requests and messages at the same time by selecting the "Send Both" option instead of the "Send Friend Requests" option. We'll talk about sending messages next.

Sending Messages

To send messages, click the "Send Messages" option on the left-hand panel. A "Subject" Box and a "Message Box" will pop-up. Simply enter a subject into the

“Subject” Box and enter your message into the “Message Box”. Again, you have the option to “Limit # To Send”. After you’re all done, click “Start” and your messages will be sent.

"Send Messages"

Sending Comments

Sending Comments works the same way as sending Friend Requests or Messages. Just select “Send Comments” from the left-hand panel and enter the comment you’d like to send. Decide if you want to “Limit # To Send”, and decide if you want to “Skip users that disable HTML comments”. You will only need to choose to skip those users if the content you are sending is in HTML. Click “Start” and let Open Adder send your comments for you.

Accepting Friend Requests

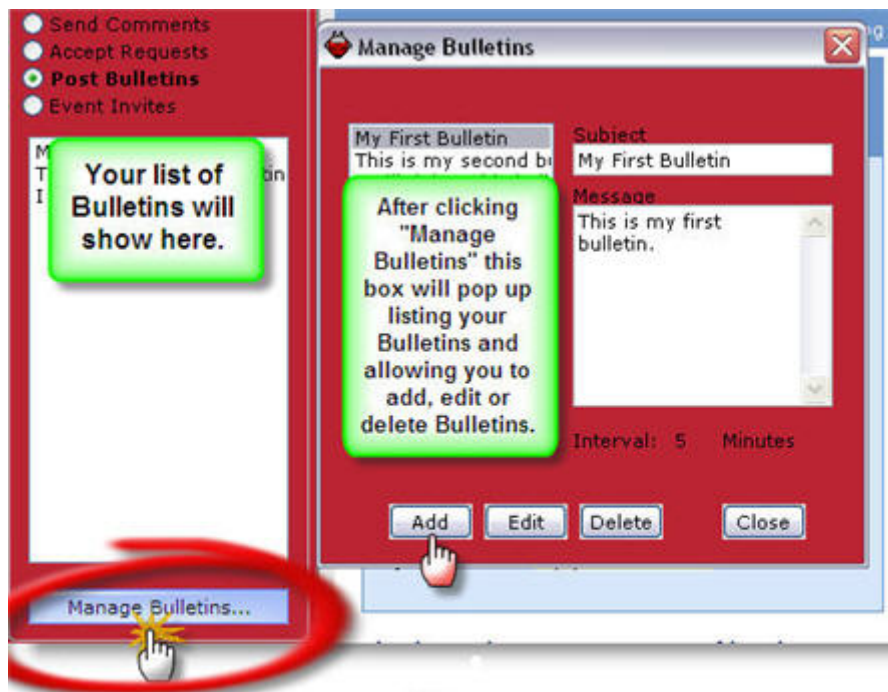

To accept Friend Requests, just click "Accept Requests". You can choose this option no matter what page you are on. Open Adder will automatically go to your Pending Friend Requests folder and accept any pending requests. Once it's finished a pop-up box will notify you that it has "Finished accepting friend requests".

"Accept Requests"

Posting Bulletins

To post bulletins, you will first need to enter a Bulletin. You can manage multiple Bulletins with Open Adder. Click on "Post Bulletins" and a Bulletin space will open up. You will also notice the option to "Manage Bulletins". Choose the "Manage Bulletins" option and a "Manage Bulletins" box will pop up. This box will show you your existing Bulletins and allow you to add, edit or delete Bulletins.

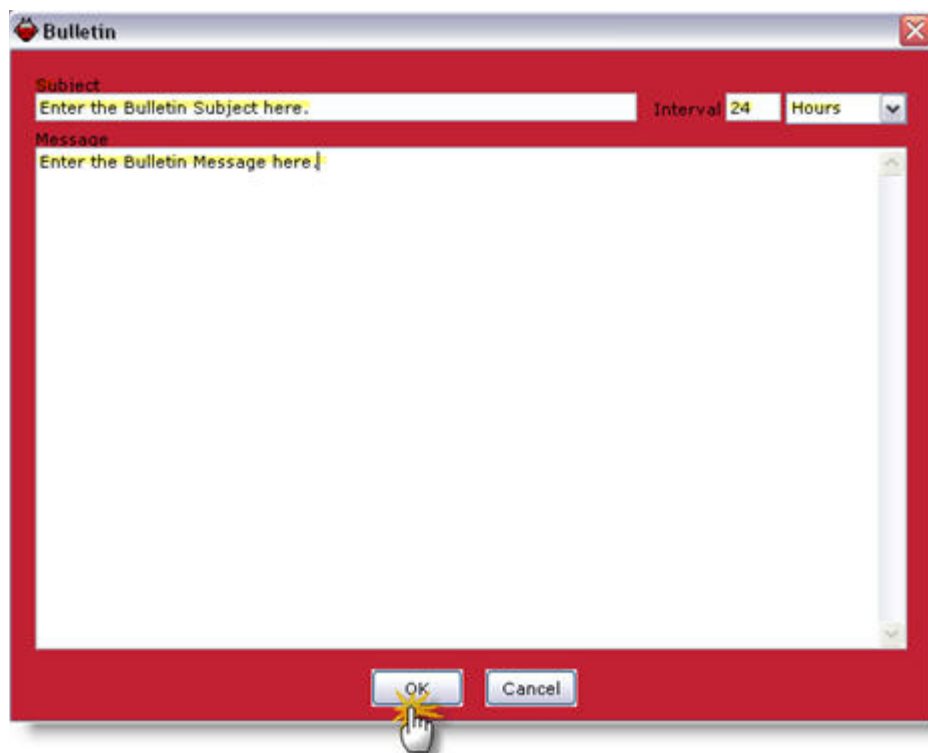

"Manage Bulletins"

To add a Bulletin, click “Add” at the bottom.

Another box titled “Bulletin” will pop up. Enter your Bulletin subject in the “Subject” field and enter the body in the “Message” field. Then select the interval of time you would like this particular bulletin to be sent out at, i.e., 60 minutes, 1 hour, 10 hours, etc.

When you’re finished, click “OK”. If you aren’t ready to save this Bulletin, click “Cancel”.

You can add multiple Bulletins.

"Bulletin Box"

To edit or delete a Bulletin, click on “Edit” or “Delete” on the “Manage Bulletins” screen. Clicking “Edit” will bring the selected Bulletin up so that you can edit it. If you click “Delete”, a box will pop up asking you to confirm that you want to delete this bulletin. Click “Yes” if you do, or “No” if you don’t.

Now, when you select the “Bulletins” option, you will see your current Bulletins in the list. Highlight whichever Bulletin you’d like to send out and click “Start”. Your Bulletins will now begin posting.

"Select the Bulletin you want to send"

Event Invites

To begin sending Event Invites, go to the event’s main page. Then select the “Event Invites” option.

You will now have the choice of selecting to send the invites to “Scanned IDs” or “By Location”.

☐ Post Bulletins
☒ **Event Invites**
☐ Scanned ID's ☒ By Location

Country

OR Within of zip
10 ▼ 34211

"Event Invites"

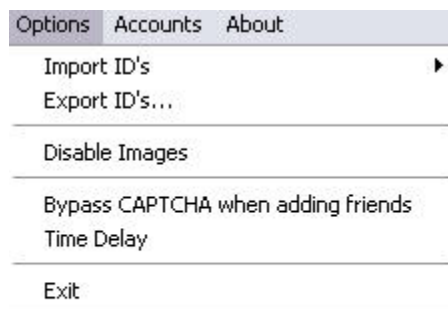

If you want to send the invitations to extracted profile IDs, select the "Scanned IDs" option. If you would like to search for people in a specified area to send the invitations to, choose the "By Location" option. Then choose the Country, City or State you would like to search in or a location by zip code. Once you have selected your options, click "Start".

If you need to stop sending, simply click "Stop". You will be notified by Open Adder once all of your invitations have been sent.

Additional Options and Features

Options

By selecting the "Options" dropdown menu from the top, you will notice several other Open Adder Options.

"Options"

Import IDs

If you would like to import IDs into Open Adder, click the Options menu at the top and when hovering your mouse over “Import IDs” you will have the option to import IDs from a text file or import IDs manually.

"Import IDs"

Clicking on “Import from File” will bring up an import box that will allow you to select the file you’d like to import. Simply click “Browse”, find the file you want to import, highlight it, click “Open” and then “OK”. The file will now be imported for you to work with.

Clicking on “Import Manually” will open up an import box that will allow you to copy, paste, and add profile IDs to work with. Just enter the IDs and click “Add”. Now you can work with those specific IDs.

Export IDS

The “Export IDs” option allows you to export IDs to a text file to work with later or to work with in another program. Just extract the IDs you’d like to save, as discussed above, and click “Options”, “Export IDs”, and choose what file you would like to save the IDs in. Once you’ve done that, click “Save” and you’re finished!

Google Keyword Search/Extraction

You can use this option to search for and extract profiles using particular keywords via Google. Simply click “Google Keyword Search/Extraction” under the “Options” menu and a pop up box will open.

Enter the keyword you would like to use and click “Go”. You can click “Stop” at any time if you want to stop the search.

Google Search

Here you can enter a search term which Google will use to find matching profiles:

A maximum of 1000 results can be extracted.

During the extraction process, Open Adder may appear to freeze. Please be patient.

GO

Disable Images

If you would like to disable images, simply select that option under “Options” at the top. To re-enable images, click the “Disable Images” option again.

Time Delay

The “Time Delay” option under the “Options” tab allows you to set the length of time you would like messages, comments, and requests sent between.

"Timer"

For example, if you would like your messages, comments, and requests sent every 5 to 10 minutes, select "from 5 minutes to 10 minutes". It is recommended that you set the delay around "human speed."

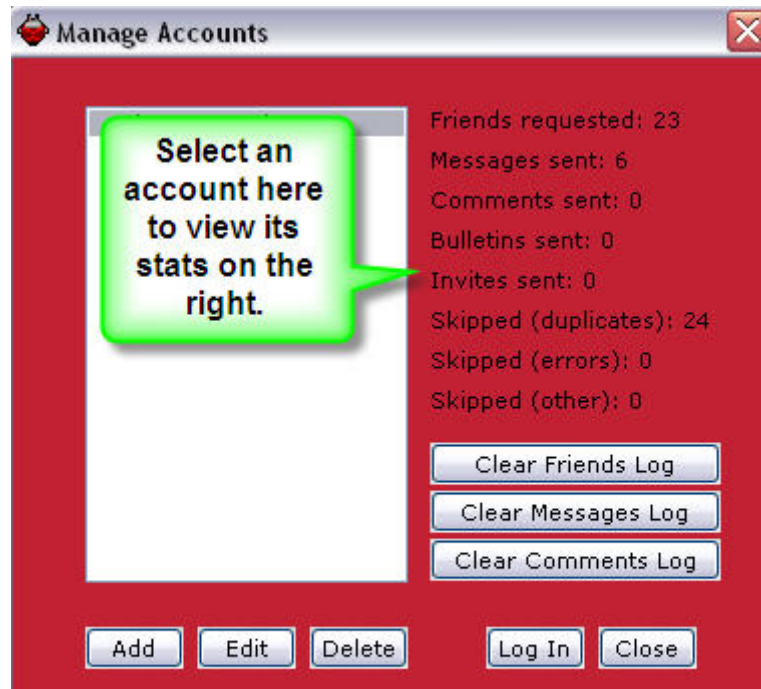

Accounts

Manage Accounts

The "Manage Accounts" tab will not only allow you to add, edit or delete accounts but also allows you to view how many Friend Requests, Messages, Comments, etc. have been sent per each account.

It will also show how many profile IDs have been skipped because they were duplicates, because of an error or skipped for another reason.

Just highlight the account you want to view the stats for and check out the stats on the right.

"Manage Accounts"

You can also clear your Friends Log, Messages Log, or Comments Log for each account from here.

View All Time Stats

By clicking on the "View All Time Stats" under the "Account" options you can see the total number of Friends Requested, total Messages sent, total Comments, Bulletins and Invites sent along with IDs skipped and why they were skipped as discussed in the paragraph above for all of your accounts combined.

It's a handy tool to track your progress.

"All Time Stats"

Chaining

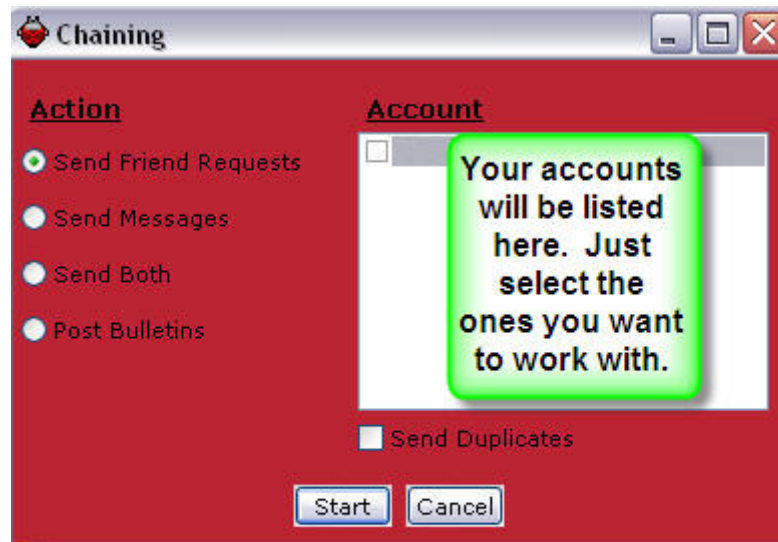

If you have multiple MySpace accounts that you'd like to work with in Open Adder, the "Chaining" feature is a handy option that will send Friend Requests, Messages, both Requests and Messages, or Bulletins through each of your accounts, one after the other.

The Chaining feature works just like sending Friend Requests, Messages, etc., normally works. The Chaining feature simply sends whatever you are sending through 'Account A', then 'Account B', then 'Account C', etc.

First you will need to extract some profile IDs to work with as you normally would. If you are sending Messages, go ahead and enter the Subject and Message you want to send. Then click "Chaining" under the "Options" tab and select what you want to send...Friend Requests, Messages, both Requests and Messages, or Bulletins. Then select the accounts you want to send from and click "Start".

"Chaining Option"

"Chaining Menu"

If you are sending Bulletins, you will notice a "times per account" box. You can determine how many times a particular Bulletin is sent through each account by entering the number of times you want the Bulletin sent in the box.

About Open Adder

Clicking "About" and then "Open Adder" will show you the version of Open Adder that you are running as well as Copyright information.
